

# TIN BREATH

TIN BREATH is a series of accessories made of high-purity tin casting (99.99%) with a Japanese paper and watercolour paper texture on the surface. The properties of tin allow this product to be bent by hand despite being a metal. They are made by a manufacturing method called casting, in which metal is poured into a mould and allowed to solidify. Despite being made of metal, it is soft and bendable and can be worn in any size.

The simple design makes use of the texture of the material and can be combined with your existing accessories. It allows you to arrange in your own way, and is suitable for all genders and ages.
